Differentials in levels of educational attainment of Scheduled Castes Women in Rural Haryana

Priyanka and Dr. Renu Arya

DOI: <https://doi.org/10.22271/27067483.2023.v5.i2a.174>

Abstract

The present study examines the differentials in levels of education attainment of Scheduled Castes women in rural Haryana based on collected primary data of selected household. The surveyed households are represented by eight Scheduled Castes. Caste wise distribution of educated womens at different levels of education has been worked out. Thereafter, the weighted score has been derived to assess the levels of educational attainment among different castes. On the basis of weighted score, the rank has been given to each caste. Female literacy rate were recorded as highest in Balmiki caste 87.35 per cent while the lowest were recorded in Dhanak caste 47.83 per cent. On the basis of aggregated weighted score, it is noted that the Balmiki Caste has obtained first rank with 216.55 in the study area followed by Dhanak second, Chamar and Banjara with third and forth rank respectively. On the other hand the Bawaria Caste occupied the lowest position with total weighted score 120.00 in the study area. Bawaria is followed by OD and Bazigar.

Keywords: Scheduled caste women, levels of educational attainment, weighted score

Introduction

Educational attainment among Scheduled Castes in India has been a topic of significant importance due to historical disadvantages and social inequalities faced by this marginalized community. Scheduled Castes, also known as Dalits, have historically faced discrimination, social exclusion, and limited access to resources, including education. Efforts have been made by the Indian government to improve educational opportunities for Scheduled Castes and bridge the educational gap. Several policies and initiatives have been implemented to promote access to education, including reservation policies, scholarships, and special schools. Reservation Policies: The Indian government has implemented reservation policies that reserve a certain percentage of seats in educational institutions, both at the central and state levels, for Scheduled Castes and other socially disadvantaged groups. These policies aim to provide opportunities for representation and access to education.

Various scholarships and financial assistance programs have been introduced to support Scheduled Caste students in pursuing their education. These programs provide financial aid for tuition fees, books, and living expenses. Special Schools: To address the specific needs and challenges faced by Scheduled Caste students, special schools and hostels have been established in some areas. These institutions provide additional support, resources, and a conducive learning environment for students from marginalized backgrounds. Despite these initiatives, challenges persist in achieving equitable educational attainment for Scheduled Castes. Some of the key challenges include: Socio-economic Factors: Poverty and social disadvantage continue to hinder educational opportunities for Scheduled Caste students. Lack of resources, parental education, and limited access to quality schools and infrastructure can affect their educational attainment. Discrimination and social biases still exist in educational institutions, which can affect the learning environment for Scheduled Caste students. Prejudice, unequal treatment, and caste-based discrimination can discourage these students from pursuing education or limit their opportunities for higher education. Dropout rates among Scheduled Caste students are higher compared to other groups. Factors such as financial constraints, lack of family support, and the need for child labor can contribute to early school leaving. Quality of Education: Ensuring the quality of education is a crucial aspect. Even if Scheduled Caste students have access to educational institutions, the quality of teaching, infrastructure, and learning materials can significantly impact their educational outcomes.

Efforts to address these challenges require a multi-faceted approach, including the implementation of effective policies, improved infrastructure, teacher training, awareness campaigns, and community engagement. By addressing these issues and providing equal educational opportunities, it is possible to improve the educational attainment among Scheduled Castes and promote social inclusiveness and empowerment.

Study Area

Haryana state is located between latitude 27° 39' to 30° 35' N and 74° 28' to 77° 36' E longitude having an area 44,212 sq. km. It has natural boundaries of the Shivalik hills in the north, the river Yamuna in its east and Ghaggar River is situated in the north-western part and southern boundary is provided by the Aravali hills which run through southern Gurugram, Rewari and Mahendergarh. The state is bounded by Himachal Pradesh on its north, Punjab on its west, Rajasthan on its south and Uttar Pradesh on its east.

Objective of the Study Area

The study has undertaken to identify Differentials in levels of educational attainment level of Scheduled Castes Women in rural Haryana.

Data Source Research Methodology

This study is based on primary data collected through field survey using structured questionnaire from selected villages. Personal interview were conducted by the researcher with the female respondent of the household. A total 600 sample household have been taken from fifteen selected villages on the basis of stratified random sampling based on different

parameters like percentage of Scheduled Castes females population, sex ration, literacy rate of Scheduled Caste women and work participation rate of Scheduled Caste women in the villages. Caste wise percent distribution of educated persons in different levels viz. primary, middle, matriculation, plus two, graduation, post-graduation, M-Phil and Ph.Ds. were find out for the total educated females. Thereafter, the weighted score were derived by assigning different weight to different levels. For example 1 to primary, 2 to middle, 3 to matriculation, 4 to plus two, 5 to graduation and B.ED, 6 to post graduation, 7 to M-Phil, 8 to PhD. After that, the weighted score has been calculated to examine the rank differentials in levels of educational attainment among castes.

Population Characteristics

The total population of sample houses in the research region is 2595 people (1362 males and 1233 females). Eight castes Chamar, Balmiki, and Dhanak, Bazigar, Banjara, Bawaria, OD, and Doom were identified in the study area. Based on sample household, total literacy rate among the Scheduled castes works out total 78.96 per cent. The male and female literacy rates separately are 87.32 per cent and 70.72 per cent respectively. The Bawaria caste reports highest literacy rate 90.00 per cent while the lowest literacy rate reported by OD 56.25 per cent. In which highest male literacy rate reported by Banjara and Doom caste cent per cent while the lowest worked out OD caste as 57.14 per cent. Female literacy rate were recorded as highest in Balmiki caste 87.35 per cent while the lowest were recorded in Dhanak caste 47.83 per cent (Table-1).

Caste Wise Educational Attainment among Scheduled Caste Women

Table-2 provides percentage distribution of educated Scheduled Castes females under various levels of educational attainment. Female with primary and middle levels of education alone account for more than two-thirds of educated females (Fig.1 and Fig.2) 13.54 per cent matriculation (Fig.3), 6.62 per cent 12th (Fig.4), 3.04 per cent Graduation (Fig.5), 0.83 post graduation (Fig.6), 0.14 MPhil and 0.14 PhD (Fig.7).

The rankings of individual scheduled castes on the basis of distribution of educated persons as recorded through the primary survey in different levels have been determined (Table 4). For this, a weighted aggregate scores have worked out. On the basis of aggregate weighted score, it has

been found that the Balmiki obtained the first rank with total weighted score of 216.55. Dhanak and Chamar obtained the second and third rank with a total weighted score of 187.50 and 184.26 respectively. On the lower side were the Bawaria and OD castes groups that obtained seventh and eighth ranks with a total weighted score of 140 and 120 respectively. Caste wise percentage distribution of educational womens under different categories of educational levels presents a mixed picture. Some of the castes are far ahead of others in terms of educational attainment as compared to others. As a result, the share of primary and above in the total educated women’s in some of the castes is strikingly larger than the average of the caste as a whole. Mention may be made of Doom, OD, Bawaria caste. On the extreme, in caste like Chamar, Balmiki,

Dhanak more than half of the educated women's are reported to have attainment education up to primary level. Is

is also interesting that 0.23 per cent women's ware engaged in M.Phil and 0.23 per cent in Ph.D. (Fig.7).

Source: Field Survey, 2021. Compiled by Research Scholar. W.S. Weighted Score.

Caste wise Rank Differential in Level of Educational Attainment of Scheduled Castes Women

To achieve the main objective of the present study, an aggregated weighted score for each of the caste has been worked out. On the basis of aggregated weighted score, it is noted that the Balmiki Caste has obtained first rank with 216.55 in the study area (Table-3) followed by Dhanak second, Chamar and Banjara with third and fourth rank respectively. On the other hand the Bawaria Caste occupied the lowest position with total weighted score 120.00 in the study area. Bawaria is followed by OD and Bazigar.

Conclusion

Chamar group has the highest population among scheduled

castes group followed by Balmiki and Dhanak and whereas Bawaria, Doom and Od have lower populations. The main reason behind low educational attainment among Scheduled castes is their unemployment, socio-economic and political backwardness. The another main reason of low educational attainment among Scheduled Caste was noticed due to Pandemic covid-19. This pandemic largely affected the educational and occupational structure in rural Haryana. It is suggested that the government should provide more facilities or incentives like opportunity in admissions by matriculations levels and better scholarships for higher education to Scheduled Caste female population.
